A commitment that keeps growing

A path that endures over time

Since 2016, the company has been building a way of understanding sustainability based on ongoing work with the people, teams and communities in its area of influence.

Every action starts from the same vision: creating opportunities that foster family, social and community development, meeting the needs of the people who are part of the company and of nearby communities, and directly improving their quality of life.

During 2025 and part of 2026, this commitment kept growing through a range of initiatives: training and support for our teams, improvements to rural housing, environmental education, tree planting and workshops on different community concerns, always alongside schools and young people.

These are diverse actions, but they are part of the same path: working in the present with the future in mind and building, together with each community, opportunities that can last over time.

Mission

We are an agribusiness that creates opportunities for the sustainable growth of its shareholders and its community.

Values

- Commitment
- Good judgement
- Honesty
- Efficiency
- Effectiveness
- Sustainability

CSR - ESG

We drive sustainable development actions, promoting balanced growth and a positive impact across the Economic · Social · Environmental · Community dimensions.

Antilla is a town in the municipality of El Potrero, in the Rosario de la Frontera department of Salta province, Argentina. It lies southeast of the city of Rosario de la Frontera, beside National Route 34 at kilometre 931, near the borders with Tucumán and Santiago del Estero provinces. **Nueva Esperanza** and **Santo Domingo** are two towns in Santiago del Estero province, in the Pellegrini department.

Our sustainability model

Sustainability is understood as an ongoing process of building, which requires presence, planning and working together.

From this perspective, the organisation carries out its work through **two main strategic lines: In-Company and Territorial**, bringing together the economic, social and environmental pillars.

In-Company

Training programmes designed to strengthen our teams' skills, providing tools for professional and personal development.

Territorial

Actions that support the communities in our areas of influence through programmes for rural housing improvement, education, the environment, tree planting and participatory workshops. Management is based on **ESG criteria (Environmental, Social and Governance)**, so that every action is planned, measurable and transparent. Implementation follows the comprehensive model of Cooperativa Generar, using the **Integrated Landscape Management (ILM)** methodology.

PEOPLE + ENVIRONMENT + TERRITORY

A comprehensive approach to supporting sustainable development in the communities where the company is present.

Creating opportunities, building the future

Over the years, different programmes have grown and broadened their reach. What began as a survey of the needs of families and the community gradually gave rise to programmes on housing, training, education, the environment and community development.

2016 Understanding before acting

Social and family survey

- **27 home visits and surveys** with employees and their families.
- **5 interviews** with community leaders in Antillas and Rapelli.
- The survey helped identify needs and guide future lines of action.

2017 Stage One | Habitat Project

Improving families' living conditions

- Launch of a **long-term, step-by-step housing improvement programme.**
- Electrical upgrades in employees' homes, **100% subsidised.**
- **70% participation** of employees and their families in family and community projects.
- Electrical installations improved for **80% of families.**

2018 2019 Stage Two | Habitat Project

Growing step by step

- Repairs, renovations and the construction of new homes are added.
- **100% participation** of employees and their families in family and community projects.
- **80% of homes** received at least one housing improvement.
- A working method based on stages, technical assistance and planning is consolidated.

2020 Stage Three | Habitat Project

Continuing and expanding

- Housing improvements continue, with new construction stages.
- **The area of impact expands to new towns.**
- Specific improvements are deepened **on the farms.**
- Technical follow-up and family support to strengthen safety, well-being and quality of life.

2021 More programmes, more opportunities

Habitat Project

- **10 families** took part in cycles of repairs, construction and extensions.
- Actions on **hygiene, safety, healthy eating and personal finances** are added.

SINCE 2016

New lines of work

- Launch of the **Field Days.**
- **Ongoing Training** programme for employees, families and supervisors.
- Community workshops in local schools.

2022
2024

Consolidating and Diversifying

- **12 families** supported with new homes, housing improvements and extensions.
- Housing improvements on company properties.
- **Waste management** is introduced.
- The **School Forest** programme is launched, planting native species.
- The **Field Days** and **Ongoing Training** continue.

The path continues

The work carried out during 2025 and part of 2026 reflects the continuity of a strategy that puts people, communities and the environment at its centre.

During this period, actions took place in different settings: within the company, supporting our teams; in homes and with families; in schools and communities; and through initiatives related to environmental education and the care of natural resources.

Train. Support. Care. Educate. Build.

Different actions, one purpose: creating opportunities and strengthening sustainable development in the communities where the company is present.

In-Company

Caring for and strengthening our teams

Sustainable development also begins at home. Strengthening the people who are part of the company means providing tools that support day-to-day work, encourage safe habits and contribute to personal and professional growth. During 2025 and part of 2026, training and technical assistance programmes were delivered to our teams, with special attention to safety and the training of farm supervisors.

Safety

The training includes content focused on prevention and care:

- Safe habits.
- First aid.

Training and Technical Assistance

The Farm Supervisors Programme covers a range of tools to strengthen day-to-day management:

- Planning.
- Managing indicators.
- Time management.
- Employees' duties and rights.
- Reading payslips.
- Work insurance and health plan.

The programme aims to give teams the knowledge and tools to handle their daily responsibilities with better information, organisation and safety.

Personal finances

Caring for and strengthening our teams

Personal finances are also part of the actions aimed at our teams.

The aim is to provide tools for better understanding and organising personal and household finances, encouraging a responsible approach to financial decisions.

Information + Planning + Tools

A programme designed to support people's all-round development, both at work and beyond.

Habitat

Improving the places where our families live

During the period reviewed, work was carried out in different areas, reaching families in Los Cebiles and Los Gurises.

The work included different types of intervention, according to each family's needs:

- Repairs.
- Extensions.
- Finishing work.
- Construction of new homes.

Los Gurises

In Burruyacu, Tucumán, and Rapelli, Santiago del Estero, a range of housing improvements were made, including repairs, extensions, finishing work and new construction. The programme thus continues a working method that responds to each family's specific needs and moves forward in stages.

- 6 homes repaired
- 3 homes extended

Los Cebiles

In Antilla, Salta, the programme reached different stages of work, with repairs, extensions and finishing work. Work was also carried out in Antilla and Potreros, and in Babilonia, Santiago del Estero.

A better home is also an opportunity to improve the daily lives of the people who live in it.

Territorial

School Forest

Planting the future

Caring for the environment is another dimension of our community work.

Through the **School Forest** Programme, in partnership with the **Model Forest Business Network for Sustainability**, we carry out tree planting with native species, linking the work on our farms with community initiatives, promoting environmental education and, at the same time, showcasing the company's sustainability actions.

2025

500 native trees planted in the communities of Rapelli, Antillas and Media Luna.

2026

200 native trees planted on the farms in June. The initiative also has an agreement with **Vivero La Florida**, strengthening work on the production and availability of native species.

Planting trees is a concrete action today with the land of the future in mind.

2025 - PART OF 2026

Tree Planting and Community

Celebrating history, planting the future

In 2025 a **Tree Planting Day marked the 40th anniversary of the Antillas School**, combining care for the environment with a special date for the school community.

Tree planting thus becomes an opportunity to come together, take part and leave a mark that goes beyond the present.

Environment + Community + Education

A single action can care for the land and, at the same time, strengthen ties with the institutions and communities in our area of influence.

Field Days

The value of Work and Production.

For **Cusillos**, commitment to the community and to sustainable local development is a priority that is lived, shared and pursued together by our teams, Cooperativa Generar and the schools in the company's areas of influence.

Through our traditional **Field Days**, we open the gates of our farms to secondary school students, building a direct bridge between education and the region's productive engine, and showing the sector's needs in terms of job training.

The challenge of putting the work of our field teams into words:

We firmly believe that to appreciate the value of farming, you need to see it from the inside. That is why the heart of this experience has unique protagonists: our own field teams.

With their experience and daily dedication, they describe their everyday tasks, sharing with students the know-how of the trade, the challenges of the sector and their passion for producing food responsibly and professionally. In this way, young people experience first-hand the scale of real work and production.

Phytobac system

A dynamic, high-tech experience organised in stations

The day follows a participatory approach organised into **work stations.** At each station, students discover and explore in depth a key aspect of our production process, highlighting the strong use of technology throughout the chain:

- **Cropping systems:** Innovation, rotation, efficient management and applied technologies for sustainable production.
- **Farm machinery:** The role of cutting-edge technology and a modern machinery fleet in efficient fieldwork and its maintenance.
- **Health and safety:** Comprehensive protection of people, risk identification and care as the top priority in every task.

Phytobac system

Phytobac system

- **Human resources and ESG (Environmental, Social and Governance):** People's development, team well-being and commitment to the community.
- **Environmental impact and efficient use of crop protection products:** Good agricultural practices to care for soil, water and the natural environment. At this station, one of the highlights for young people is seeing WEED-IT technology in action, showing how selective spraying takes environmental efficiency to the maximum.
- **Phytobac and wastewater management:** Innovative environmental infrastructure for safe handling, biological breakdown and pollution prevention using the Phytobac system.

Education, local roots and ESG (Environmental, Social and Governance)

Through these experiences, the company seeks to inspire vocations, encourage young people to stay in the region and convey a modern vision of farming: one that combines cutting-edge technology and economic efficiency with a local and regional impact.

We believe in the transforming power of education; we know that sowing knowledge today means securing a more prosperous, safe and sustainable future for our whole community.

During 2025, the Field Days brought together:

- **150 young people**
- **3 schools**
- **4 health professionals**

Over 5 years, 600 school students have taken part.

Phytobac system

Participatory Workshops

Listening, supporting, building

Each community's needs also shape our work.

During 2025, participatory workshops were held on a range of topics of interest to the community:

- Managing emotions.
- Responsible waste handling.
- Violence.
- Games that support learning.

Up to July 2026, new topics were added:

- Young people and life plans.
- Responsible use of social media.
- Workshops exclusively for teachers.

The content is built on the needs raised by school communities. Workshops are held at the request of head teachers and teaching staff, creating spaces for participation and learning.

Around 75 to 100 young people take part in each session.

Listening to a community's needs is also a way of supporting it.

Local Presence

A network that grows from the communities

Our community work is built on ties with the institutions and people that make up each community.

As of July 2026, the workshops are held in:

7 schools

Primary and secondary schools in the company's area of influence.

1 Association

Casa de la Mujer, Nueva Esperanza.

Workshops are held at the request of head teachers and teaching staff, so that the content responds to the specific interests and needs of each institution.

This approach strengthens a way of working based on listening, collaboration and building together.

A commitment that keeps growing

Sustainability is built through concrete actions and the ability to sustain them over time.

Every improved home, every tree planted, every training session, every young person who takes part and every school that opens its doors is an opportunity to strengthen the ties between the company, people and communities.

The path we began years ago continues to take on new challenges and new ways of supporting communities.

Because growing sustainably does not only mean producing and developing: it also means promoting action, mobilising resources and creating opportunities for the development of people and communities.
